Andrews Heat for Hire provide storage company with bespoke heating package

When a storage company contacted Andrews Heat for Hire in search of an effective climate control solution, our specialists were on hand to recommend a solution that would raise the temperature in their two-story warehouse.

The application in question is used to store large quantities of products ranging from bikes to clothing and accessories from big international brands. All items are kept in the warehouse before being distributed across the country. During the winter months, the client experienced a fault with their heating system, leaving workers in freezing temperatures. As a result, Andrews were approached and asked to provide an emergency solution capable of warming a substantial indoor area.

Following a site survey, our heating specialist was able to calculate the volume of the application and provide the customer with an effective heating solution consisting of two FH4000 oil heaters. Two 3000-litre fuel tanks were also delivered to site, ensuring both units remained functional throughout the working day.

We provided the client with an out-of-hours service, delivering and installing the heating units within hours of initial contact. Our experts managed to raise the ambient temperature of the warehouse by 10 degrees – from 8°C to 18°C as requested by the client – providing a comfortable working environment for all employees.

The customer was extremely impressed with the effectiveness of the short-term heaters, keeping the units on hire for a total of 12 weeks until their internal system had been repaired.

Power supply 415 V 3 ph +E 50 Hz Run 20 A
Generator size 20 kVA
Noise level (max) 76.5 dBA @ 1 metre
Duct size 600 mm x 2
Weight 1300 kg
Fuel Consumption 38 ltrs/hr
Dimension 3,850 x 1,200 x 2,015 mm
Typical heated area 8,457 m
Control Manual, External controls available
(24 V external control circuit)
Fuel type Gas Oil
Plug type BS4343 4 pin 3 ph 16 A
Flue 1 mtr x 250 mm
